Abstract

This report summarizes the observations and results of ambient air testing for asbestos and total respirable dust conducted at the various Bay Area Rapid Transit (BART) stations with asbestos-containing fireproofing and/or vinyl asbestos floor tiles and mastics. The monitoring was conducted from February 22-24, 2016. The purpose of monitoring the stations with asbestos-containing fireproofing was to determine the level of airborne asbestos in the stations and to assess the potential hazards to occupants.

The sample results revealed airborne asbestos fiber levels ranging from <0.001 to 0.002 fibers/cc based on Phase Contrast Microscopy (PCM) analyses. These results indicate that the airborne asbestos concentration at all sites tested is statistically comparable to background levels, and is not affected by the presence of asbestos-containing construction materials, such as asbestos-containing fireproofing found throughout the structural members.

The downtown San Francisco stations experience black soot from the Muni-Metro system sharing a similar tunnel and ventilation system and from rail grinding activities. Airborne sampling was conducted for total respirable dust. In summary, total respirable dust concentrations were found to be as follows:

- Total respirable dust levels at the Embarcadero Center Station's Service Area adjacent to the Bike Room on the Concourse Level had a concentration ranging from 0.01 to 0.112 mg/m³ with a median concentration of 0.063 mg/m³, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m³.
- Total respirable dust levels at the Embarcadero Center Station's Station Agent's Booth on the Concourse Level had a concentration ranging from 0.008 to 0.171 mg/m³ with a median concentration of 0.077 mg/m³, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m³.
- Total respirable dust levels at the Montgomery Station's Fan Room 301 on the Platform Level had a concentration ranging from 0.011 to 0.103 mg/m³ with a median concentration of 0.068 mg/m³, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m³.
- Total respirable dust levels at the Montgomery Station's Station Agent's Booth on the Concourse Level had a concentration ranging from 0.008 to 0.116 mg/m³ with a median concentration of 0.06 mg/m³, or well under the OSHA Permissible Exposure Limit of 5.0 mg/m³.

Finally, settled dust samples from the track bed at the Montgomery, Powell and Civic Center Station and the Glen Park Station Fan Room were analyzed for metal content with the following results (see Table 1):

- The Montgomery Street trackside soot sample has an elevated concentration (8,400 mg/kg) of zinc over the TTLC concentration of 5,000mg/kg, defining this material as a hazardous waste. STLC testing of cadmium, chromium, copper, lead and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead and zinc for this station.
- The Powell Street trackside soot sample has an elevated concentration of cadmium (390 mg/kg), chromium (670 mg/kg), copper (3,100 mg/kg) and zinc (12,000 mg/kg) exceeding the Title 22 TTLC for each (see Table 7). STLC testing of cadmium, chromium, copper, lead, nickel and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead, nickel and zinc for this station.
- The Civic Center trackside soot sample has an elevated concentration of antimony and copper over the TTLC concentrations of 500 and 2,500 mg/kg, respectively, defining this material as a hazardous waste. STLC testing of cadmium, chromium, copper, lead and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead and zinc.

1.0 Introduction

This report summarizes the sampling results collected during the ambient air monitoring for asbestos conducted in the Bay Area Rapid Transit's system-wide stations with asbestos-containing fireproofing. The airborne asbestos sampling included the following stations:

- Powell Street Station, San Francisco, CA
- Montgomery Street Station, San Francisco, CA
- 12th Street Station, Oakland, CA
- 19th Street Station, Oakland, CA
- MacArthur Station, Oakland, CA
- Berkeley Main Station, Berkeley, CA
- Ashby Station, Berkeley, CA
- 16th Street Station, San Francisco, CA
- 24th Street Station, San Francisco, CA
- Rockridge Station, Oakland, CA
- Lafayette Station, Lafayette, CA

SCA Environmental, Inc. (SCA) conducted the monitoring from February 22, 2016 to February 24, 2016 at the request of the Bay Area Rapid Transit District's System Safety Department.

Portions of the systems' structural steel are protected with fireproofing that contains 5 to 10% Chrysotile asbestos. In addition, several other construction materials contain asbestos (including various vinyl floor tiles and mastics in various Train Control Rooms throughout the legacy stations. Asbestos is regulated as a respiratory carcinogen. In order to verify that the operations and maintenance program implemented for this building are working properly, testing for the levels of airborne asbestos fibers is conducted periodically.

2.0 Methodology

Asbestos

Ambient air samples for asbestos were collected at the following stations and quantities:

- San Francisco
- Powell Street Station (2)
- Montgomery Street Station (2)

- Oakland
- 12th Street Station (1)
- 19th Street Station (1)
- MacArthur Station (1)
- Berkeley Main Station (1)
- Ashby Station (1)

- M-Line
- 16th Street (1)
- 24th Street (1)

- C-Line
- Rockridge (1)
- Lafayette (1)

All the asbestos samples were analyzed by Phase Contrast Microscopy (PCM), except for the project blanks, in accordance with the National Institute for Occupational Safety and Health (NIOSH) method 7400. PCM results are calculated in fibers per cubic centimeter (f/cc).

All air samples were collected for an approximately 24 hour period using Buck Libra low flow, AC-operated or similar air pumps to maintain even flow rates. Samples were collected on Zefon International Inc. Model Z008BA 25-millimeter, 0.8-micrometer pore size, mixed cellulose ester membrane filters in open-faced cassettes with conductive cowls. Pump flow rates were calibrated against a primary standard.

The contract laboratories that provided analytical asbestos services for the project are summarized below:

| Laboratory | Analysis Type | Accreditation |
|--|--|--|
| EMSL Analytical, Inc. San Leandro, CA | Phase Contrast Microscopy (PCM) Asbestos Analyses | <ul style="list-style-type: none"> • National Voluntary Laboratory Accreditation Program (NVLAP # 101048-3). • California Environmental Laboratory Accreditation Program (ELAP #1620). |
| Asbestos TEM Laboratories, Inc., Berkeley, CA | Bulk Asbestos Analysis by Polarized Light Microscopy (PLM) | <ul style="list-style-type: none"> • National Voluntary Laboratory Accreditation Program (NVLAP #101891-0). • California Environmental Laboratory Accreditation Program (ELAP #1866). |

Respirable Dust

Ambient sampling for total respirable dust was conducted at two downtown San Francisco stations, which experience black soot and dust deposits associated with the Muni-Metro system within the same tunnels and ventilation system and wheel grinding activities. Total respirable dust sampling was conducted at:

- Montgomery Street Station, San Francisco, CA
- Embarcadero Station, San Francisco, CA

Particulate readings were made utilizing a TSI Dust-Trak, which measures respirable dust or PM₁₀ levels. Measurements are reported as mg/m³.

Particulate matter (PM) is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in size, shape and chemical composition, and can be made up of many different materials, such as metals, soot, soil, dust, mold and fungi. Particles 10 microns or less in diameter are defines as “respirable particulate matter” or PM₁₀. Fine particles are 2.5 microns or less in diameter (PM_{2.5}) and can contribute significantly to regional haze and reduction in visibility.

Spot Particulate Sampling.

In addition to the longer-term respirable dust sampling at the two BART stations noted above, SCA conducted spot sampling at agent booths, ticket machines and trackside to determine typical PM₁₀ and PM_{2.5} concentrations for BART passengers and employees. Stations sampled included 24th Street through Embarcadero in San Francisco.

Particulate readings were made utilizing a TSI Dust-Trak, which measures PM_{2.5} and PM₁₀ levels.

Settled Dust Sampling

CAM-17 metal analyses were completed for settled dust samples collected in the Montgomery, Powell and Civic Center track beds by EPA Method 6010B/7470A by McCampbell Analytical Inc.’s ELAP-accredited laboratory in Pittsburg, CA. Additionally, CAM-17 TTLC, STLC and TCLP analyses were recently completed for settled dust in the Glen Park BART Station, which have been included herein for informational purposes. PLM analyses for asbestos were also recently conducted at the Glen Park Fan Room.

3.0 Applicable Standards

Asbestos

A summary of airborne asbestos standards applicable to this project is tabulated in Table 2 as follows:

Table 2: Summary of Asbestos Standards

| Source | Level | Nature | Comments |
|-----------------------------|------------------------------|--------------------------|---|
| Cal/OSHA ¹ | 0.1 f/cc | Occupational & mandatory | 8-hour Time Weighted Average (TWA) Permissible Exposure Level (PEL) (triggers OSHA required training, medical examinations, etc.) |
| | 1.0 f/cc | | Excursion Limit (EL) for 30 minutes sampling duration |
| NIOSH ² | 0.1 f/cc | Recommended | Occupational PEL |
| ACGIH ³ | 0.2 f/cc | Recommended | Occupational Threshold Limit Value (TLV) Notice of Intended Changes |
| Calif. Prop 65 ⁴ | vague | Mandatory | Standard and monitoring method are unclear, but generally interpreted as comparable to outside ambient air |
| Bay Area Rapid Transit | 0.01 f/cc (PCM) | Contractual & mandatory | Ambient air action level for occupied areas via PCM. Originating from AHERA ⁵ regulations and adopted by Bay Area Rapid Transit. |
| | 70 str/mm ² (TEM) | Contractual & mandatory | Ambient air action level for occupied areas via TEM. Originating from AHERA ⁵ regulations and adopted by Bay Area Rapid Transit. |

1 California Department of Industrial Relations, Division of Occupational Safety and Health, 8 CCR 1529.

2 National Institute of Occupational Safety and Health

3 American Conference of Governmental Industrial Hygienists, 2004

4 California Proposition 65

5 Asbestos Hazard Emergency Response Act (AHERA); 40 CFR Part 763

Respirable Dust

Extensive research indicates that exposure to PM₁₀ and PM_{2.5} levels exceeding current air quality standards is associated with increased risk of hospitalization for lung and heart-related respiratory illness, including emergency room visits for asthma. PM exposure is also associated with increased risk of premature deaths, especially in the elderly and people with pre-existing cardiopulmonary disease. In children, studies have shown associations between PM exposure and reduced lung function and increased respiratory symptoms and illnesses.

Table 3 below summarizes the applicable published Cal/OSHA and ACGIH permissible exposure limits for respirable dust as well as the California Air Resources Board's standards. Note that some of the addressed standards cover office environments and are not occupational exposure standards for BART station employees. In addition, many of these standards are arithmetic mean levels over a 24-hour or annual period; therefore, exposure within the BART system needs to be time-weighted against other daily or annual exposures outside the BART system.

Table 3: Summary of Respirable Dust Standards

| Contaminant | Source | Level | Nature | Comments |
|---|------------------------|------------------------------|---|---|
| Particulate | N/A | ambient | N/A | Compare against outdoor readings to indicate effectiveness of filter units in air handling system |
| | Cal/OSHA ¹ | 5 mg/m ³ | Mandatory/ Occupational | 8-hour TWA PEL for respirable dust |
| | | 10 mg/m ³ | | 8-hour TWA PEL for total dust |
| | ACGIH ² | 10 mg/m ³ | Recommended/ Occupational | 8-hour TWA TLV resulting in lung disorders |
| | EPA ³ | 0.05 mg/m ³ | Recommended/ Indoor Occupancy (Offices) | National Ambient Air Quality Standard |
| Respirable Particles (PM ₁₀) | ASHRAE ⁴ | 0.05 mg/m ³ | Recommended Indoor Occupancy (Offices) | Based on protecting office environments against respiratory morbidity in the general population and avoiding exacerbation of asthma with no carcinogens. Indoor concentrations are normally lower. Guideline level may lead to unacceptable deposition of "dust." |
| | | | | |
| | 0.02 mg/m ³ | Annual arithmetic mean level | | |
| | EPA ³ | 0.15 mg/m ³ | Recommended by LEED Program (for Offices) | National Ambient Air Quality Standard |
| | LEED ⁶ | 0.05 mg/m ³ | Recommended by LEED Program (for Offices) ⁶ | 8-hour TWA PEL for respirable dust for office environments using a TSI Sidepak Aerosol Monitor or PEM Sampler with PM ₁₀ lab analyses |
| Respirable Particles (PM _{2.5}) | CARB ⁵ | 0.02 mg/m ³ | Recommended by CARB | Annual arithmetic mean level |
| | EPA ³ | 0.035 mg/m ³ | Recommended by EPA | 24-hr arithmetic mean level |

CAM-17 Metals

Total Threshold Limit Concentrations (TTLC), Soluble Threshold Limit Concentrations (STLC), and Toxicity Characteristic Leaching Procedure (TCLP) limits are published under Title 22 of the California Code of Regulations §662261.24 for classifying hazardous waste. Applicable standards for the CAM-17 metals are included in Tables 1, 7 and 8 herein.

4.0 Results and Discussion

Asbestos

Sampling was conducted as part of the BART's Ambient Air Quality Monitoring Program, since the listed stations have asbestos-containing fireproofing. Sampling was conducted for an approximately 24-hour period from February 22 to February 24, 2016 in the San Francisco stations and February 23 to February 24, 2016 in the East Bay Stations.

At the request of Mr. Jonathan Rossen, CIH, CSP within BART's System Safety Department, SCA Environmental, Inc. (SCA) conducted visual inspections and ambient air testing. SCA's Environmental Scientist, Mr. Jerry Cook (Certified Asbestos Consultant #01-2925), conducted work under the direct supervision of Mr. Glenn Cass, PE, CIH of SCA. Mr. Cass is a Cal/OSHA registered Certified Asbestos Consultant (CAC #92-0092) and a Certified Industrial Hygienist (CIH).

The ambient air sampling results for the Stations are summarized in Table 4 below. The laboratory reports and field data sheets are included as Attachment 1. All observed asbestos-containing fireproofing was noted to be in "good" condition. No notable areas of imminent danger were observed within the representative areas viewed by SCA's Surveyor. Asbestos fireproofing on the Concourse Level of the Powell Street Station was significantly abated since the prior ambient air sampling in May 2011.

Background airborne fiber concentrations by PCM were as follows:

Table 4: Summary of Airborne Asbestos Results – Stations with ACM Fireproofing

| Station | Location | Sample I.D. | Results (fibers/cc) | Comments |
|------------------------------|--------------------------|--------------|---------------------|---|
| Lafayette | Train Control Room w/VAT | LAF-TC103-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Rockridge | Janitor's Room 203 | ROCK-203-1 | 0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| MacArthur | Break Room 102 | MAC-102-1 | 0.002 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Berkeley | Break Room 108 | BERK-108-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Ashby | Elevator Room 204 | ASH-204-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| 19 th St. Oakland | Mech. Room 108A | 19-108A-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| 12 th St. Oakland | Electrical Room 107C | 12-107C-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Montgomery | Coffee Shop Storage Rm. | MONT-110-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Montgomery | Storage Room 111 | MONT-111-2 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Powell | Police Break Room | POW-POL-BK-2 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| Powell | Storage Room 110 | POW-110-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| 16 th St. Mission | Mech. Room 101A | 16-101A-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |
| 24 th St. Mission | Mech. Room 101A | 24-101A-1 | <0.001 | Well below the EPA's PCM Clearance Air Standards of 0.01 f/cc |

All ambient station air samples were below BART's Perimeter Action Level of 0.01 fibers per cubic centimeter (fibers/cc). The results were generally found to be comparable to the previous sampling rounds completed by SCA and other Consultants.

Respirable Dust (PM_{10})

SCA sampled for respirable dust at two San Francisco Stations to determine typical airborne dust concentrations. Sampling occurred during typical daytime and nighttime operations with the fans on as well as overnight. The purpose of this sampling was to determine the concentrations of black carbon soot arising from the Muni-Metro system, which shares a common ventilation system.

Total respirable dust concentrations were found to be as follows:

Table 5: Respirable Dust Concentrations

| Location | Start Date | Sampling Time | Respirable Dust Concentration | | | Permissible Exposure Limit (mg/m^3) | Comments |
|---|------------|---------------|-------------------------------|-------------------------|----------------------------|---|----------------------|
| | | | Max. Level (mg/m^3) | Min. Level (mg/m^3) | Average Level (mg/m^3) | | |
| Embarcadero Concourse Level Central Station @ Bike Room | 2/22/16 | 19:30 hrs. | 0.112 | 0.01 | 0.063 | 5.0 | Well Below 8-hr. PEL |
| Embarcadero Concourse Level South Station Agent's Booth | 2/22/16 | 20:06 hrs. | 0.171 | 0.008 | 0.077 | 5.0 | Well Below 8-hr. PEL |
| Montgomery Platform Level Station Fan Room 301 | 2/23/16 | 22:20 hrs. | 0.103 | 0.011 | 0.068 | 5.0 | Well Below 8-hr. PEL |
| Montgomery Concourse Level South Station Agent's Booth | 2/23/16 | 22:21 hrs. | 0.116 | 0.008 | 0.06 | 5.0 | Well Below 8-hr. PEL |

All sample results were found to be well under Cal/OSHA's occupational exposure standard of $5.0 mg/m^3$.

Spot PM_{10} and $PM_{2.5}$ Reading

The results of spot PM_{10} and $PM_{2.5}$ readings for various San Francisco Line stations are presented in Table 6.

Table 6: Spot PM₁₀ and PM_{2.5} Readings

| Station | Date | Time | Location | PM ₁₀ Concentrations (mg/m ³) | | | PM _{2.5} Concentrations (mg/m ³) | | |

Source: (1) California Environmental Protection Agency Air Resources Board, April 25, 2005
<http://www.arb.ca.gov/research/aaqs/caaqs/pm/pm.htm>
 (2) Table AC-1 Permissible Exposure Limits for Chemical Contaminants
https://www.dir.ca.gov/title8/5155table_ac1.html

None of the spot measurements found PM₁₀ levels exceeding Cal/OSHA's 8-hr. Permissible Exposure Limit of 5.0 mg/m³; Cal/OSHA has no established occupational standard for PM_{2.5}. While the short-term PM_{2.5} exposures exceed the EPA/CARB level of 0.35 mg/m³, the EPA/CARB standard is an annual average concentrations. Passengers and employees need to weigh their exposures outside of the station with the time-weighted exposures indoors. Note that the airborne levels within the BART system largely contain carbon, cellulose, silica and iron as contaminants, based on previous bulk sample analyses.

Cleanup of the stations with HEPA-filtered vacuums would help reduce the airborne dust concentrations. Use of power washing would require proper filtering and disposal of the waste water because of its metal content.

Settled Dust

Settled dust samples were collected within the track bed at three San Francisco Stations to determine their metal content. Analyses were completed by McCampbell Analytical Inc.'s ELAP-accredited laboratory. The results of the CAM-17 analyses are as follows:

Table 7: Settled Dust CAM-17 TTLC Metal Analyses

| CAM-17 Metal | Sample MONT-SOOT-202-1 | | Sample POWELL-SOOT-302-1 | | Sample CIVIC-SOOT-402-1 | | Title 22 Hazardous Waste |
|--------------|------------------------|------------------|--------------------------|------------------|-------------------------|------------------|--------------------------|
| | TTLC (ppm) | STLC/TCLP (mg/l) | TTLC (ppm) | STLC/TCLP (mg/l) | TTLC (ppm) | STLC/TCLP (mg/l) | TTLC/ STLC Standard* |

ND = None Detected NR = Not Reported

N/A = TTLC results under 10% of standard, so extraction testing is not required

TBD = To Be Determined

TTLC = Total Threshold Limit Concentration in ppm or mg/kg

STLC = Soluble Threshold Limit Concentrations in mg/liter

TCLP = Toxicity Characteristic Leaching Procedure in mg/liter

The results of the CAM-17 analyses are as follows:

- The Montgomery Street trackside soot sample has an elevated concentration (8,400 mg/kg) of zinc over the TTLC concentration of 5,000 mg/kg, defining this material as a hazardous waste. STLC testing of cadmium, chromium, copper, lead and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead and zinc for this station.
- The Powell Street trackside soot sample has an elevated concentration of cadmium (390 mg/kg), chromium (670 mg/kg), copper (3,100 mg/kg) and zinc (12,000 mg/kg) exceeding the Title 22 TTLC for each (see Table 7). STLC testing of cadmium, chromium, copper, lead, nickel and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead, nickel and zinc for this station.
- The Civic Center trackside soot sample has an elevated concentration of antimony and copper over the TTLC concentrations of 500 and 2,500 mg/kg, respectively, defining this material as a hazardous waste. STLC testing of cadmium, chromium, copper, lead and zinc are needed to determine the leachability of these metals. Previous soot sampling in 2011 showed similar concentrations for chromium, copper, lead and zinc.

For comparison purposes, recent sampling of soot in the Glen Park Fan Room found the following CAM-17 metal concentrations:

Table 8: Glen Park Station Soot CAM-17 Metal Analyses Results

| Sample I.D. | Metal | Measured TTLC (ppm) | Measured TCLP/STLC (mg/l) | Title 22 Hazardous Waste TTLC/STLC Standard | Comments |
|--------------|-----------------|---------------------|---------------------------|---|---|

NR = Not Reported
 ND = None Detected

Polarized Light Microscopy (PLM) analyses for asbestos for the Glen Park Fan Room MV-7 found the following results:

Table 9: Glen Park Station Soot Bulk Asbestos Analyses

| Sample I.D. | Location | Asbestos content | Comment |
|--------------|------------------------------------|------------------|--------------|
| GP-MV-7-Soot | Glen Park Fan Room MV-7 Floor Soot | None detected | Non-asbestos |

In summary the Glen Park Station Fan Room MV-7 soot analyses found the following:

1. The CAM-17 tests for Sample I.D. GP-MV-7-Soot show metal concentrations well under Title 22 hazardous materials standards, with the exception of cadmium, chromium, copper and zinc. These results are similar to the last round of sampling completed of settled dust in the Electrical Rooms at 24th & Mission and Civil Center Stations in 2014. SCA recommends the use of a half face-piece HEPA-filtered respirator within these areas unless a negative exposure assessment is completed. In lieu of the respiratory protection

for tradespersons, the Contractor may wish to HEPA vacuum these areas in advance of their work to reduce contact with the settled dust. HEPA vacuum debris will need to be disposed as hazardous waste.

2. Asbestos: Settled dust is non-asbestos per PLM analyses [SCA Sample I.D. GP-MV-7-Soot]. The majority of the soot consists of fiberglass fragments, carbon, cellulose, silica and iron.
3. Lead: A lead concentration in the sample is 480 ppm or under the Consumer Products Safety Council's limits for paints set in 1978. This concentration is considered minimal; however, any lead concentration can pose a health hazard if good work practices are not utilized in dusty areas. While not considered a hazardous waste at these levels, lead dust controls and personnel protection are still required under 8 CCR Section 1532.1 unless personal air sampling is conducted for a negative exposure assessment. Cal/OSHA does not consider a dust mask as adequate protection for lead hazards so a half face-piece HEPA-filtered respirator should be used for work within the Fan Room if a negative exposure assessment is not completed and the Contractor does not undertake HEPA vacuuming in advance of their work. Workers should always wash their hands before eating, drinking or smoking to protect against ingestion of heavy metals. Dirty coveralls should be handled in a manner to protect against bringing heavy metal home where they can affect the worker's family. Tyvek disposable coveralls or washable coveralls are recommended only if the Cal/OSHA action level of 30 mg/m^3 is exceeded. Based on SCA's prior sampling, good work practices will keep workers well under this level.

Note that airborne metal analyses were not conducted for the San Francisco stations in 2016 as the prior sampling found airborne metal concentrations to be relatively low. For informational purposes the metal concentrations in May 2011 for the Powell, Montgomery and Embarcadero Stations were as follows:

- Airborne lead concentrations during the sampling periods all fell below $0.014 \text{ } \mu\text{g/m}^3$, or less than the analytical detection limit. All perimeter airborne lead concentrations fell well below Cal/OSHA's Action Level or Permissible Exposure Level (PEL) of $30 \text{ } \mu\text{g/m}^3$ and $50 \text{ } \mu\text{g/m}^3$, respectively, as well as the National Ambient Air Quality Standard (NAAQS) of $1.5 \text{ } \mu\text{g/m}^3$.
- Airborne iron concentrations during the sampling period ranged from <4.6 to $80 \text{ } \mu\text{g/m}^3$. All airborne iron concentrations fell well below Cal/OSHA's Permissible Exposure Level (PEL) of $5,000 \text{ } \mu\text{g/m}^3$.
- Airborne copper concentrations during the sampling period ranged from <0.11 to $1.1 \text{ } \mu\text{g/m}^3$, or well below Cal/OSHA's Permissible Exposure Level (PEL) of $100 \text{ } \mu\text{g/m}^3$ for copper fume.
- Airborne zinc concentrations during the sampling period all fell below $1.4 \text{ } \mu\text{g/m}^3$, or less than the analytical detection limit, or well below Cal/OSHA's Permissible Exposure Level (PEL) of $5,000 \text{ } \mu\text{g/m}^3$ for zinc fumes.
- Airborne nickel concentrations during the sampling period ranged from <0.11 to $0.39 \text{ } \mu\text{g/m}^3$, or well below Cal/OSHA's Permissible Exposure Level (PEL) of $1,000 \text{ } \mu\text{g/m}^3$.
- Airborne chromium concentrations during the sampling period all ranged from 0.12 to $0.21 \text{ } \mu\text{g/m}^3$, or well below Cal/OSHA's Permissible Exposure Level (PEL) of $500 \text{ } \mu\text{g/m}^3$.

Please feel free to contact me directly at (510) 517-1119 or gcass@sca-enviro.com if you have any questions or require any additional information.

or other approved signatory

*Following EMSL Analytical SOP Asbestos and Other Fibers by PCM. Limit of detection is 7 fibers/mm². Intra-laboratory Sr values: 5-20 fibers = 0.35, 21-50 fibers = 0.30, 51-100 fibers = 0.20. The laboratory is not responsible for data reported in fibers/cc, which is dependent on volume collected by non-laboratory personnel. Results have been blank corrected as applicable. EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. Samples received in good condition unless otherwise noted.

CAM-17 Settled Dust Metals Analyses – Montgomery, Powell & Civic Center Stations

McC Campbell Analytical, Inc.

"When Quality Counts"

Analytical Report

WorkOrder: 1602945

Report Created for: SCA Enviromental, Inc.

1 Lakeside Drive, Suite 215
Oakland, CA 94612

Project Contact: Glenn Cass

Project P.O.: K11983

Project Name: K11983

Project Received: 02/23/2016

Analytical Report reviewed & approved for release on 03/01/2016 by:

Angela Rydelius,
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: SCA Enviromental, Inc.
Project: K11983
WorkOrder: 1602945

Glossary Abbreviation

| | |
|--------------|--|
| 95% Interval | 95% Confident Interval |
| DF | Dilution Factor |
| DI WET | (DISTLC) Waste Extraction Test using DI water |
| DISS | Dissolved (direct analysis of 0.45 µm filtered and acidified water sample) |
| DLT | Dilution Test |
| DUP | Duplicate |
| EDL | Estimated Detection Limit |
| ITEF | International Toxicity Equivalence Factor |
| LCS | Laboratory Control Sample |
| MB | Method Blank |
| MB % Rec | % Recovery of Surrogate in Method Blank, if applicable |
| MDL | Method Detection Limit |
| ML | Minimum Level of Quantitation |
| MS | Matrix Spike |
| MSD | Matrix Spike Duplicate |
| N/A | Not Applicable |
| ND | Not detected at or above the indicated MDL or RL |
| NR | Data Not Reported due to matrix interference or insufficient sample amount. |
| PDS | Post Digestion Spike |
| PDSD | Post Digestion Spike Duplicate |
| PF | Prep Factor |
| RD | Relative Difference |
| RL | Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.) |
| RPD | Relative Percent Deviation |
| RRT | Relative Retention Time |
| SPK Val | Spike Value |
| SPKRef Val | Spike Reference Value |

Analytical Qualifiers

a16 reporting limit raised due to high metals content

Glossary of Terms & Qualifier Definitions

Client: SCA Enviromental, Inc.
Project: K11983
WorkOrder: 1602945

Quality Control Qualifiers

F8 MS/MSD recovery and/or RPD was out of acceptance criteria; PDS validated the prep batch. If PDS recovery was out of acceptance criteria, DLT validated the prep batch.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

Chain of Custody (COC) Information

Chain of custody present? Yes No
 Chain of custody signed when relinquished and received? Yes No
 Chain of custody agrees with sample labels? Yes No
 Sample IDs noted by Client on COC? Yes No
 Date and Time of collection noted by Client on COC? Yes No
 Sampler's name noted on COC? Yes No

Sample Receipt Information

Custody seals intact on shipping container/cooler? Yes No NA
 Shipping container/cooler in good condition? Yes No
 Samples in proper containers/bottles? Yes No
 Sample containers intact? Yes No
 Sufficient sample volume for indicated test? Yes No

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes No
 Sample/Temp Blank temperature Temp: NA
 Water - VOA vials have zero headspace / no bubbles? Yes No NA
 Sample labels checked for correct preservation? Yes No
 pH acceptable upon receipt (Metal: <2; 522: <4; 218.7: >8)? Yes No NA
 Samples Received on Ice? Yes No

UCMR3 Samples:

Total Chlorine tested and acceptable upon receipt for EPA 522? Yes No NA
 Free Chlorine tested and acceptable upon receipt for EPA 218.7, 300.1, 537, 539? Yes No NA

* NOTE: If the "No" box is checked, see comments below.

Comments: STLC Cd Cr Cu Pb Zn & TCLP Pb added 2/26/16 5D TAT

Contact's Email: gcass@sca-enviro.com; pgervasio@scaehs.com

Date Add-On: 2/26/2016

| Lab ID | Client ID | Matrix | Test Name | Containers /Composites | Bottle & Preservative | Collection Date & Time | TAT | Sediment Content | Hold | SubOut |
|--------------|--------------|--------|--|------------------------|-----------------------|------------------------|---------|------------------|--------------------------|--------|
| 1602801-001A | GP-MV-7-S00T | Solid | SW6020 (Lead) (TCLP) | 1 | 8OZ GJ | 2/19/2016 8:15 | 5 days* | | <input type="checkbox"/> | |
| | | | SW6020 (Metals) (STLC) <Cadmium, Chromium, Copper, Lead, Zinc> | | | | 5 days* | | <input type="checkbox"/> | |

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

334 19th Street, 2nd floor
Oakland CA 94612

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address, fax number or email; of any changes in your contact/ mailing information within 15 days of the change.

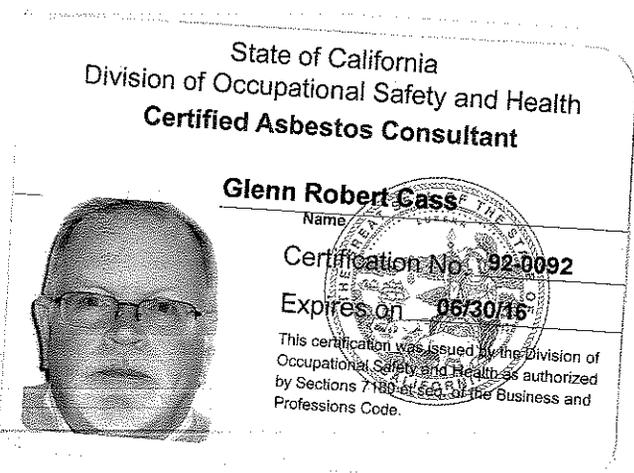

Sincerely,

Jeff Ferrell
Senior Safety Engineer
